

# GASGUN CONVERSION KITS

Sutcliffe Electronics first produced Gasgun conversion kits in 1985. They are still available with the current range of MkIII and MkIV electronics modules.

The kit provides an economic way of obtaining a new Gasgun, with a year's guarantee, without the expense of buying a new barrel. It is easy to install using the normal tools found in a farm workshop, on almost any propane gasgun. The conversion taking about an hour.

The kit consists of the same weatherproof housing as the KITGUN, electronics module, long reach spark plug, plug mounting plate, all necessary leads, and full

instructions. It is assumed that the high pressure regulator, gas pipe and fittings from the old gun are still serviceable.

Gasgun conversion kits are available direct from Sutcliffe Electronics by mailorder, or can be purchased through your

# KITGUN BIRD SCARERS

Kitgun Bird Scarers are available in a range of four options. These are the mix of two types of barrel, and two models of electronics.

The barrel options are standard, and high wind. ( The high wind model has been test fired direct into a 60Kph air flow with no loss of bang. )

The electronics options are MkIII & MkIV.

The MkIII electronics give a switched option of one or two bangs, variable interval between bangs on a knob, and adjustable Morning delay timer.

The MkIV electronics give a switched option of one, two or four bangs, variable interval between bangs on a knob, an

adjustable Morning delay timer, and a randomise function which adjusts the current setting by plus or minus 50%. Ie set to 4 bangs with an interval of 20 minutes, there could be between two and six bangs, with an interval of anything from ten minutes to half an hour.

The Kitgun comes complete with Gas regulator, and just requires ten minutes of assembly before it is up and running. A 12V car battery and propane gas are required to provide power

Kitguns are available direct from Sutcliffe Electronics by Mail order, or can be purchased through your local farm dealer.
